Response to Amendment

1. Applicant's amendment filed 02/02/2005 has been entered and carefully considered.

Claims 1 and 3-5 have been amended.

Claim 2 has been canceled.

The new drawings of figures 1-3 have been submitted.

Reasons for Allowance

2. Claims 1 and 3-6 are allowed.

3. The following is a statement of reasons for the indication of allowable subject matter:

In combination with other limitations of claims, the cited prior arts fail to teach an apparatus for measuring the temperature in an appliance, wherein the apparatus comprising first and second resistors coupled in series between the voltage supply and ground to form a first voltage divider, the junction of the first voltage divider being coupled to an input of a microprocessor so as to provide a signal indicative of the voltage across the first resistor, wherein the first and second resistors each comprise one or more individual resistors interconnected by one or more jumpers to provide suitable resistance values corresponding to the supply voltage, and a third resistor coupled in series with the temperature transducer between the voltage supply and ground to form a second voltage divider, the junction of the second voltage divider being coupled to an input of the microprocessor so as to provide a signal indicative of the voltage across the temperature transducer; wherein the microprocessor determines a

temperature using the voltage across the temperature transducer and the second resistor to determine the resistance of the temperature transducer, as recited in amended claim(s) 1. It is these limitations as they are claimed in the combination with other limitations of claim, which have not been found, taught or suggested in the prior art of record, that make these claims allowable over the prior art.

In combination with other limitations of claims, the cited prior arts fail to teach an apparatus for measuring the temperature in an appliance, wherein the apparatus comprising first and second resistors coupled in series between the voltage supply and ground to form a first voltage divider, the junction of the first voltage divider being coupled to an input of a microprocessor so as to provide a signal indicative of the voltage across the first resistor, and a third resistor coupled in series with the temperature transducer between the voltage supply and ground to form a second voltage divider, the junction of the second voltage divider being coupled to an input of the microprocessor so as to provide a signal indicative of the voltage across the temperature transducer; wherein the microprocessor determines a temperature using the voltage across the temperature transducer and the second resistor to determine the resistance of the temperature transducer; and the microprocessor determines the temperature using a look-up table correlating the resistance of the temperature transducer to the temperature, as recited in amended claim(s) 5. It is these limitations as they are claimed in the combination with other limitations of claim, which have not been found, taught or suggested in the prior art of record, that make these claims allowable over the prior art.
